

PERIOP MASTERY 2.0

Confidence-Based Education Improves Efficiency *and* Quality of Care

PERIOPSOLUTIONS@AORN.ORG

Standardize Team Excellence

Periop Mastery 2.0 helps bridge the knowledge gaps of your experienced nurses, including travelers, by accurately assessing their practice competencies and targeting education to the individual's specific areas of weakness. The outcome is a cohesive nursing team that is practicing with competence *and* confidence.

Measurable Improvement

When every team member can apply evidence-based standards to their care for every surgical patient, and that level of care is consistent across all cases, you will achieve improvements in both efficiency and quality measures.

- 19 courses, with individual contact hours, provide in-depth training and education in the perioperative practice areas where mistakes are most common. Facility course administrators have two years to register students into assigned modules. Once registered, students have one year to complete a module.
- Each module is an exceptional tool to prep for certification.
- The self-contained program is customized to each team member's specific needs.
- Participants will pre-test to identify practice weaknesses and deficiencies, they will study to understand evidence-based practice recommendations, and, with the post-study test, you and they can validate their new level of competence.

EDUCATION MODULES: (35.5 TOTAL CONTACT HOURS)

These courses (lengths vary) can be purchased individually or as a package of 19 to assure excellence across the spectrum of perioperative practice.

- Environmental Cleaning
- Hand Hygiene
- High-Level Disinfection
- Hypothermia
- Malignant Hyperthermia
- Moderate Sedation
- Older Adult
- Patient Skin Antisepsis*
- Pneumatic Tourniquet
- Positioning
- Radiation Safety
- Retained Surgical Items*
- Safe Environment of Care
- Sharps Safety
- Sterile Technique
- Sterilization*
- Surgical Attire
- Transmission-Based Precautions
- Venous Thromboembolism

*Quality Improvement Packages

It is estimated that more than 60% of nurses will over-estimate their skill levels. The Periop Mastery Quality Improvement Package will put them to the test.

Individual QI packages, (Surgical Site Infection, Sterilization Failure and Retained Surgical Items), address the greatest risks and the most common breakdowns in practice that lead to patient injury, inefficient processes, and facility liability. In addition to the Mastery module, each package provides a quality and risk assessment, webinar, checklist, and a model to build a business case to support purchasing decisions. The QI packages will raise confidence among your team, mitigate the frequency of near-misses, and reduce the potential for a sentinel event.

- Quality Improvement: Surgical Site Infection
- Quality Improvement: Sterilization Failure
- Quality Improvement: Retained Surgical Items
